

Malfeasance Warning

Any individual failing to do their own research in to potential short or long term damage caused by mask wearing or lateral flow testing is committing an act of malfeasance which can carry the term of life imprisonment.

On contacting the PUBLIC HEALTH ENGLAND it has been confirmed to us that no Risk Assessments have been carried out on either of these methods. Which as I am sure you are aware is criminal behaviour.

If your school are distributing tests then it is the schools staff who will be held personally liable for their actions.

In our research our findings show that face coverings cause oxygen deprivation. Starving the brain and blood stream of oxygen causing degenerative long term brain damage.

There are also medical studies to show masks in several cases causing bacterial pneumonia.

We are aware of the deaths of 4 children.

In regard to lateral flow testing recent medical journals show a 67 year old lady had her brain membrane punctured acquiescing to the lateral flow testing.

This led to the ladys spinal fluid leaking out of her nose. Leaving her brain open to all kinds of bacteria.

Finally we would appreciate you referring to the government website where they clearly state that the lateral flow test cannot detect a virus.

Such serious child abuse will not be tolerated.

Any one blindly following orders without investigation will be prosecuted.
